

Update on the National Renal Dataset

James Medcalf
Clinical Lead KQIP
September 2010

To recap

Rise

- NRD commissioned following NSF 2004/5
- Signed off in 2008
- Mandated from May 2009 and 2011

Plateau

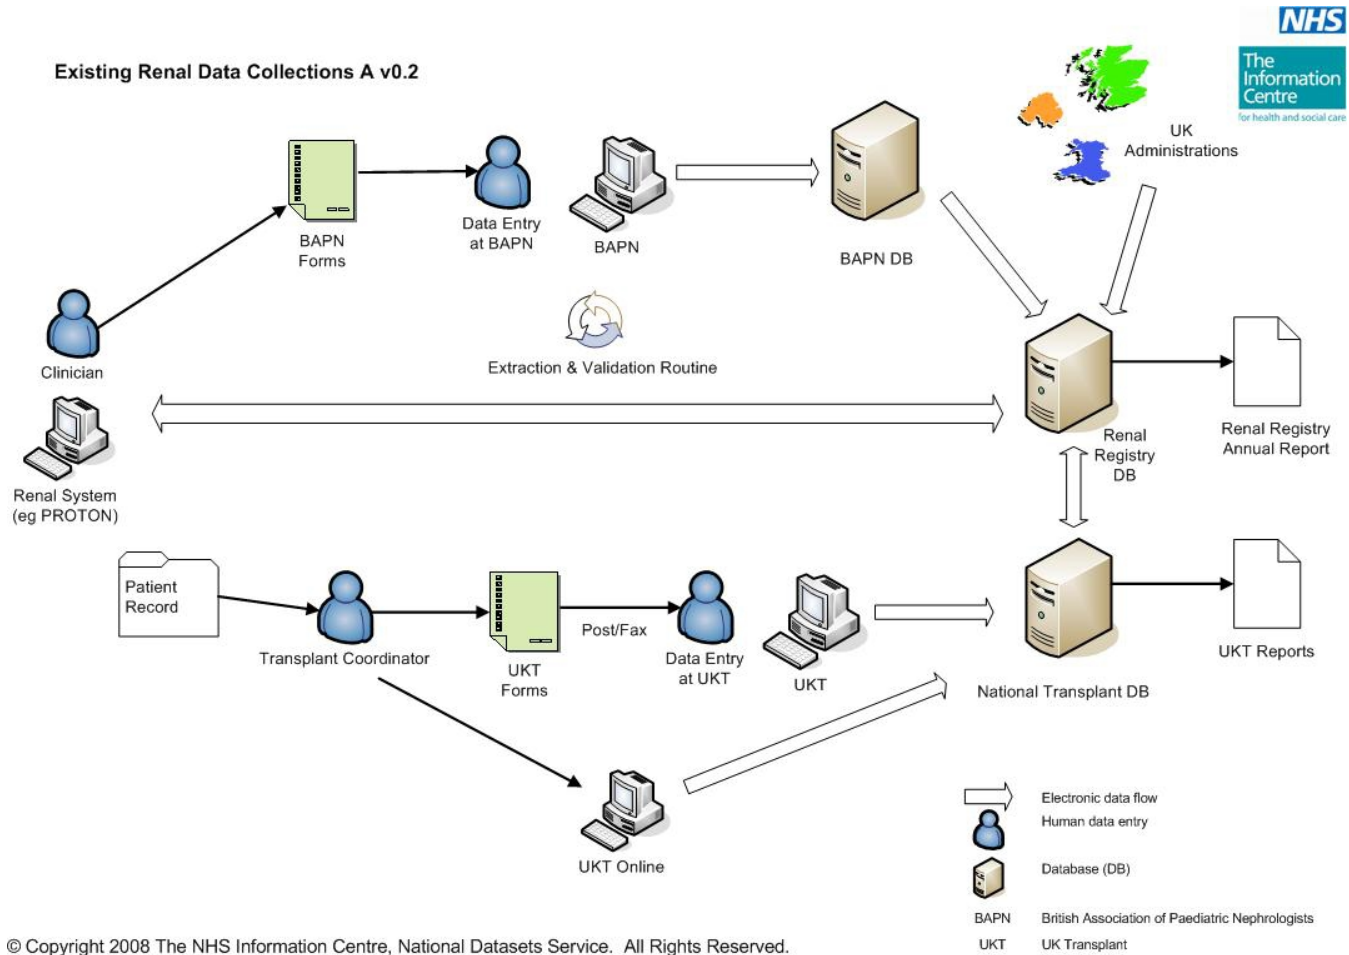

- Loss of momentum in NPfIT
- Loss of clarity around mandation
- Loss of purpose “what is the point of the NRD”

The rise again

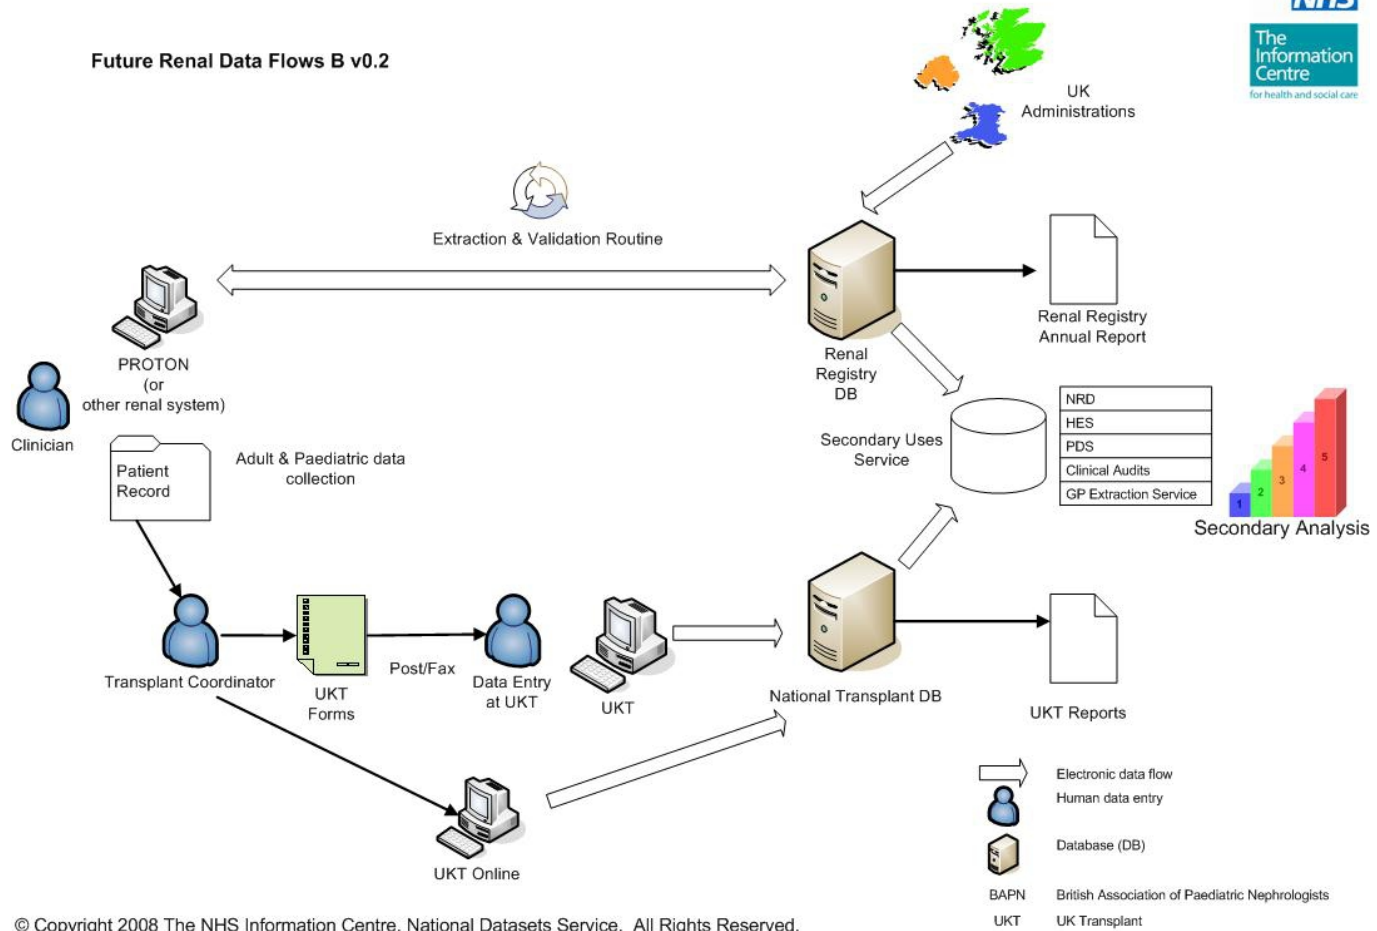

Under going a re-fresh

- Removal of items
 - Duplicates
 - Not considered useful for National Collection
 - Those frankly not collectable
- Re-statement of “mandation” to UKRR and NHSBT
- Re-focus on key Quality Standards and Indicators for quality improvement (IQI)
- Evidence that it is needed (e.g. PbR)

Existing Renal Data Collections A v0.2

Future Renal Data Flows B v0.2

Not improved this time

- New items
- Re-numbering of items

Behind the scenes

- ROCR
- ISB
- NHS data dictionary
- Defining information items to share and link
- Developing the means to share items quickly for multiple audiences
